

CEPRAMAST-DC

INTRA-MAMMARY SUSPENSION

For Veterinary Use Only

COMPOSITION:

Each 3gm syringe contains:
Cefalonium250mg

PHARMACEUTICAL FORM:

Intramammary suspension

INDICATIONS:

Recommended for routine dry cow therapy to treat existing sub-clinical infections and to prevent new infections, which occur during the dry period.

The veterinary medicinal product is recommended to treat existing sub-clinical infections and to prevent new infections which occur during the dry period caused by the following Cefalonium-sensitive organisms: *Corynebacterium bovis*, *Staphylococcus aureus*, *Streptococcus dysgalactiae*, *Streptococcus uberis*, *Escherichia coli*, *Klebsiella* spp., and *Arcanobacterium pyogenes*.

DOSAGE & ADMINISTRATION:

Dosage: Infuse one syringe per quarter once only

Administration: Before infusion, the teat should be thoroughly cleaned and disinfected. Avoid contamination of the nozzle after removing the cap. After last milking of lactation is complete thoroughly clean and disinfect the end of the teat with the cleaning towel provided. Remove the cap fully by holding the barrel of the syringe firmly in one hand and with the thumb push up and along the length of the cap until the cap clicks off. Take care not to contaminate the nozzle.

Insert the nozzle into the teat canal and apply steady pressure on the syringe plunger until the full dose has been delivered. Holding the end of the teat with one hand, gently massage upwards with the other to aid dispersion of the antibiotic into the quarter. Finally immerse the teats in a teat dip.
